Come out big with Poseidon for UML

Dear Poseidon User,

2004 will be an important year for software developers: Team modeling will finally become reality and UML 2.0 is making large advances. And to start this year off right we want to help you help others.

Model as team - the new Enterprise Edition

The Enterprise Edition of Poseidon for UML with ground-breaking team support is about to be released. We want to offer selected members of our community the innovative experience of modeling as a team! Apply now for our free **Early Access Program**.

The Enterprise Edition offers unique **realtime collaboration for UML modeling**. Your team can work on one model from several workstations yet everyone always stays in sync. You can tightly interact over long distance, or make changes on exclusive parts of a shared model while others access immediately.

If you want to give your team an edge, the Enterprise Edition Early Access Program may be for you. Sign up today to be considered for the Enterprise Edition Early Access Program! **Application period ends on January 23, 2004.**

New functionality in Poseidon for UML 2.1.2

Poseidon for UML is on its way to being the best platform for UML 2.0 modeling. In a new minor release we have made a number of enhancements and further plug-ins are available.

- . A new **rich text editor** allows professional documentation within your model. It has full HTML markup capabilities.
- . **Rational Rose import** (from .mdl) has been further improved.
- . Visibility and ordered property of association ends now show in the diagram.

Plug-ins for Poseidon for UML

Have you ever wondered how to generate high quality layouts of your diagrams within your Poseidon for UML-environment? From now on, this will be quick and easy: we have integrated **autolayout plug-ins** that help you generate high professional layouts within Poseidon for UML. Furthermore, we offer a new AndroMDA plug-in that provides an integration of Poseidon for UML and the **AndroMDA code generation framework**. It helps you with faster code generation and deployment of components (e. g. J2EE or JBoss) as well as higher productivity through UI-based model markup. Check out what the different plug-ins can do for you.
