Poseidon for UML 2.2 just released

Dear Poseidon User,

Would you believe it: At the world's largest IT fair, CeBIT in Hannover, the only UML tool presented will be Poseidon for UML. But more about this in our next newsletter ;-) Here is our new release.

Release 2.2 just published

The new release 2.2 of Poseidon for UML contains over 180 improvements and new features. We have added C++ code generation and support for association classes. Reverse engineering for Java is now faster and more reliable. Actors can now be used in multiple diagrams. Tagged values attached to a stereotype are automatically assigned to a model element along with the stereotype. These features and many more are available at:

Launch of Enterprise Edition at the CeBIT fair

Modeling as a team is about to become real. The new Enterprise Edition of Poseidon for UML enables distributed teams to simultaneously work on a common model. This world novelty will be launched at the CeBIT fair. Register for an appointment for a live demo and win a free flight over the gigantic fairground in Hannover!

Embedded Edition 2.2 released

Our Embedded Edition, based on the general release 2.2, provides sophisticated C and C++ code generation from class and state diagrams with an extremely small footprint and outstanding performance. All engineers for embedded and realtime systems, check it out for yourself:

UML terms and phrases

With all the new terms and phrases turning up in UML due to new trends and developments and the upcoming UML 2.0 standard, one can easily lose track of all the abbreviations and technical terms. If you come across a special UML term that you haven't heard before or that you've found in our documentation, just have a look at our glossary.

EJB plug-in available now

The b+m EJB plugin for Poseidon for UML is based on the b+m Generator FrameWork and provides an integration of Poseidon for UML within this framework. Take advantage of easy code generation directly from the UML model and increased flexibility by defining several profiles. By storing settings in active UML models, the EJB plug-in enables better handling. Keep one environment to develop your design and generate your implementation with the b+m EJB plug-in for Poseidon for UML. Want to know more details about our latest plug-in? Then learn more about the EJB plug-in from the detailed description:
