### Poseidon for UML 2.5 Available Now

---

A concurrent license mechanism like that of the Enterprise Edition is now available for the Professional Edition. Concurrent licenses are independent of specific users and PCs, and are therefore especially interesting for teams with large numbers of Poseidon for UML users; plus, they can even be used outside the company! You can borrow licenses from the license server and work at home, on a notebook, etc. Let our animated viewlet demonstrate the concurrent license mechanism to you:

### Concurrent License Mechanism

---

Decide for yourself whether you want a single user or concurrent license (also known as a floating license). Or combine both license types and benefit from the license price model that best suits your company's needs. If a concurrent license for the Professional Edition of Poseidon for UML is just what your company has been looking for, you will be happy to learn about our introductory offer that presents a comprehensive tool with superb flexibility at a fantastic price. Save 20 % off of the standard price - have a look at the figures:

Did you know? Changing common characteristics of a group of elements can be accomplished in one step. Whether the elements are of the same type or are a diverse set of elements, you can apply property changes to the group as a whole, eliminating the need to edit each element individually. Select the elements you would like to edit by holding the Control key while clicking on the elements in the diagram. All properties the elements have in common will appear in the Properties tab, ready to be altered. Watch our demo to see how this works:
