Major Revisions to the Community Edition

Only four short years ago, Gentleware was founded from a community- based, academic origin. We take pride in maintaining these roots, and as such we have added lots more functionality to the Community Edition. Full printing capabilities, removal of the watermark, and complete undo and redo are now standard CE features fully available to non-commercial users and students in particular. Roundtrip Engineering Advancements

Roundtrip engineering with Poseidon has never been easier or more flexible. Some of the highlights include code generation into different source directories, code generation exclusion per classifier, new synchronization dialogs, and superior conflict resolution between model and source code. For a complete look at all of the major advances, check out our viewlet.

Eclipse IDE Integration

Poseidon for UML, including the improved roundtrip engineering functionality, has been fully integrated into the Eclipse IDE, giving you the best of two worlds - the ease of Poseidon and the power of Eclipse. Changes made in the source code within Eclipse can update your model, and your model can generate code directly into your Eclipse project. Poseidon's familiar and intuitive interface is included to dramatically shorten the learning curve. Our viewlet illustrates these features and more - and if you want even more information, we can gladly arrange webcasts, seminars, and the like. Visit our website for more details about the Eclipse integration and how to contact us.
