### Poseidon for UML 3.1 Released

---

#### Dear Poseidon User,

Summer is here - the shadows are getting longer and the days are getting warmer. But no playing hookey for us - your dedicated Gentleware team has been going full throttle to bring out release 3.1, and we're not letting up for 3.2.

Read on to learn more about our latest accomplishments...

### New Product Offering - UML Debugger

---

Eliminate the need to write clumsy code for creating complex test structures - the UML Debugger plug-in from SOL helps you debug and test your UML models and target application within the same integrated environment by modeling test object structures using UML object diagrams.

The UML debugging process presents the real picture of the application's structure and behavior based on its execution. This is accomplished at high level of abstraction - in UML, with an integrated view on the target application's object structure. The application's structure is manipulated from within the UML model, not by digging into the target code.

## Poseidon for UML - 3.1 Official Release

---

The release candidate of Poseidon for UML has finally been promoted to a full release, thanks in no small part to the dedicated users who sent in their helpful comments and praise for the project.

Put the power of the new State Chart Diagrams and customized documentation generation to work for you in your production environment. The release is, as always, gratis for Poseidon 3.x license owners. All other users can request their quote via email or phone.
