### Poseidon for UML 6.0 Released

---

#### Dear Gentleware Customer,

Our progression into model-driven software development and corresponding domain-specific languages has been an exciting and successful path for us. Of course, we are maintaining our commitment to our flagship products that have made us who we are. We are proud to bring you the newest version of Poseidon for UML, complete with new usability features you have come to expect from our quality products.

### Poseidon for UML version 6.0 - Official Release

---

We are excited to present the newest version of Poseidon for UML, which includes many new usability features to make your models not only quicker and simpler to create, but also easier to share and communicate with other stakeholders.

Highlights include:

- Graphic import for elements and stereotypes
- New UMLdoc interface with drag and drop
- UMLdoc HTML preview
- HotSpot bookmarking
- Enhanced full-screen editing functions, particularly in sequence and state diagrams
- Color gradients
- And more!

### Model-Driven Professionals

---

Gentleware has earned an outstanding reputation in the realm of modeling tools. It was a natural step to apply the expertise gained from UML and Eclipse projects to progress into

model-driven software development.

## Model-Driven Software Development Market Expansion

---

You may have noticed the new look to our website, including the new addition of "a member of the b+m group". In an exciting move, we've teamed up with b+m in order to expand further into the project market for model-driven software development, with a particular focus on domain-specific languages (DSLs).

You may already know b+m as the initiator of the popular openArchitectureWare generator framework; they are a leading software solution provider with a strong model-driven approach. Combining their experience with our particular knowledge of Eclipse-based modeling tools and domain specific languages (DSLs) creates a wealth of synergies.

Looking to speed up your project with a DSL and generator? Drop us a line.

## Gentleware at JAX 2007

---

We would like to cordially invite you to our JAX stand, where we can show you the advantages of Model Driven Software Development (MDSD) in the context of your enterprise.

Don't let this opportunity pass you by, particularly if at least one of the following subject areas is relevant to you:

- Reduction of software development costs
- MDSD as an alternative to offshoring
- Increased quality through MDSD

Have we piqued your curiosity? You can find us from April 24-26 2007 at Stand A5.

## Apollo for Eclipse

---

Apollo for Eclipse is the first commercial modeling tool based on the Eclipse Graphical Modeling Framework (GMF). Designed for programmers and developers, it also closely resembles custom tools built by Gentleware for a wide variety of clients and uses. Those interested in a preview of what a custom tool could look like will be particularly well-served by giving Apollo for Eclipse a thorough review.

Flexible license rental options allow you to use Apollo for Eclipse for a single, short-term project, or long-term with a worry-free subscription. Apollo for Eclipse is also available without cost in an unlicensed version that does not include export options.
