Apollo for Eclipse version 2.0 - Official Release

We are proud to present the newest major release of Apollo for Eclipse, which includes many innovative new usability features to make your modeling faster and more cogent.

The most significant improvement is the addition of class diagrams, which enable you to build custom views of your model that include only those elements you select. The package diagrams from version 1.x that display your complete model are still available, of course.

Additional highlights include:

- User-defined class diagrams
- New rapid buttons
- Improved reverse engineering
- UML property panel for attributes
- Expanded inline editing
- Association filtering
- Bug Fixes
- And more!

Model-Driven Software Development

Gentleware has teamed up with b+m in order to expand further into the project market for model-driven software development, with a particular focus on domain-specific languages (DSLs).

You may already know b+m as the initiator of the popular openArchitectureWare generator framework; they are a leading software solution provider with a strong model-driven approach. Combining their experience with our particular knowledge of Eclipse-based modeling tools and domain specific languages (DSLs) creates a wealth of synergies.

Looking to speed up your project with a DSL and generator? Drop us a line.

Poseidon for UML version 6.0

Have you already checked out the newest version of Poseidon for UML? It includes many new usability features to make your models not only quicker and simpler to create, but also easier to share and communicate with other stakeholders.

Highlights include:

- Graphic import for elements and stereotypes
- New UMLdoc interface with drag and drop
- UMLdoc HTML preview
- HotSpot bookmarking
- Enhanced full-screen editing functions, particularly in sequence and state diagrams
- Color gradients
- And more!
